BEB x00

Part N°: 904x.0x

...Setting Signals

IMPORTANT CUSTOMER INFORMATION

Dear customer,

Please note that the maximum specified current supply of the power supply must not be exceeded, otherwise there is a risk of irreversible corruption of the module.

Important!

Determine before startup, the current consumption for all of the modules currently connected exactly.

If the stated in the data sheet maximum current is being exceeded please reduce the current load by redistribution or reduction of the connected modules so that the maximum current is no longer exceeded.

With kind regards
Your Blankom team service

1. Safety and operating instructions

When assembling, starting-up and adjusting the modules, it is necessary to consider the system specific references in the manual instruction!

The modules may only be installed and started up by authorized technical personnel!

When assembling the modules into the receiving points, the adherence of the EMC regulations is to be secured!

The assembly and wiring have to be done without voltage!

All active modules may only be operated with the Headend Controller HCB x00 or Bus Extender BEB x00!

The main voltage and the operating voltage of the modules working by DC have to be in compliance to the operating parameters described in the technical data.

With all work the defaults of the DIN EN 50083 have to be considered! Especially the safetyrelevant execution of the DIN EN 60728-11 [1] is necessary!

2. Device variants

BEB 200	9047.01 Bus Extender with 8A-power supply (100 ... 240 V~ input)
BEB 300	9048.01 Bus Extender with 8A-power supply (48 V~ input)
BEB 300	9048.02 Bus Extender with 8A-power supply (48 V~ input)

3. General

The Bus Extender BEB x00 is a module of the head end system B-LINE but can also be used for the C-LINE/ C-LINE⁺ head end system. The B-LINE is a complete system for the middle sized distribution network, while the C-LINE/ C-LINE⁺ is for smaller distribution networks. All active modules are programmed at the central Headend Controller (HCB x00).

The individual modules will be addressed at the address switch at the Bus Extender (line) and the respective modules (position).

The status of the individual modules will be displayed by colored LEDs:

- Red - ERROR Operating voltage failure
- Green - READY Operating status
- Yellow - ADDR. Remote control access or redundancy function

4. Front view

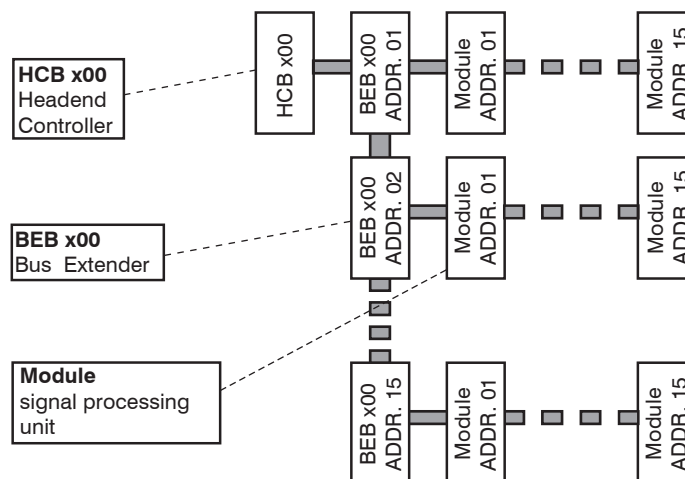

5. Functional description

The Bus Extender BEB x00 is the necessary extension module for the head end bus system. It is equipped with 3 bus connection sockets. The sockets X1 and X3 are equivalently occupied and are serving the vertical bus extension. The X2 socket of the BEB x00 is responsible for power supply of signal processing units (modules) within the respective line. It also defines the address of the line and canalizes the data transfer (see chapter 6). The total power consumption of the respective line (all connected modules within one line) may not exceed the current limit of the BEB x00. The ADDR. switch position “0” is switching the BEB x00 into redundancy operation status. Two BEB x00 will be switched parallelly. The left/ first (ADDR. = 1...15) canalizes the data transfer, the right/ second BEB x00 (ADDR. = 0) supplies current/ power. The left/ first BEB x00 overtakes the power supply of the respective line in case of a failure (see chapter 7)

One address is made up of two parts. The first address-part will be allocated with the address selection switch of the BEB x00 for the total line (01/ xx ... 15/ xx) and indicates the address of the respective line, the second part will be allocated with the address selection switch at the connected modules (xx/ 00 .. xx/ 15) and indicates the address of the respective module within the line. (see chapter 8)

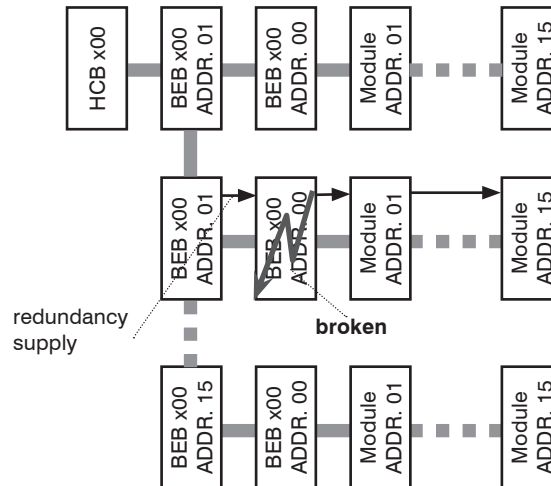

6. Head end bus structure

The number of the possible module connections (01 ... 15) to a BEB x00 depends on the total power consumption of this line!

7. Redundancy circuit

(Line redundancy)

Description of the power supply redundancy (line redundancy)

- Adjustment of the address 00 at the right Bus Extender per line
- Adjustment of the address (1 ... 15) at the left Bus Extender per line

The left/ first BEB x00 will automatically take over the current supply of the line if the right Bus Extender is failing.

8. Invalid mixed alignements

Mixed alignements on which the modules may be connected directly to the main-bus (HCB x00 at X1/ X2, BEB x00 at X1/ X3) and at the line-bus (BEB x00 at X2) are not valid.

9. Technical data

Address extent

Extended address range

(Line address) 1 ... 15

Address for redundancy 0

Modules address range

(Module address) 0 ... 15

Power supply BEB 200

Main voltage 100 ... 240 V, (+10%/- 5%)

Voltage frequency 47 ... 63 Hz

Main connector built in connector

EN 60320-1/ C8

(IEC 320 C8) [3]

Internal device fuse

G5 x 20, T4A (IEC 127-2/ V)

Power consumption max. 110 W

Output voltage 12 V

Ripple noise ratio 66 dB

Current drain max. 8 A**

Current limit yes (9 A typical)

Short circuit protection yes

Overvoltage protection yes ($\leq 14,5$ V)*

Protection class II according DIN VDE 0860 [4]

Protection system IP 20

Radio noise suppression according DIN VDE 0871

(curve B) [5]

Power supply BEB 300 (9048.01)

Input voltage 48 V DC (36 ... 72 V DC)

Input current (at 48 V) 2.4 A

Power consumption max. 125 W

Overcurrent protection fold back
(at 110 ... 143% I_{OUT})

Overvoltage protection 16.8 ... 20 V

Max. current drain 8 A (-10 ... +43 °C)**

6 A (+55 °C)

Voltage stability 1500 V DC (input/ output)

Radio noise suppression EN 55022 (CIS PR22)

Class B [6]

EN 61000-4-2,3,4,6,8 [7] /

ENV 50204 [8]

Power supply BEB 300 (9048.02)

Input voltage 48 V DC (36 ... 72 V DC)

Input connection Plug with screw termination,
with polarity protection

Fuse

T 6.3 A/ 250 V "H" (5x20,
internal")

Polarity reversal protection

yes

Power consumption

max. 110 W

Voltage stability AC

1500 V (input/ output)

Output DC voltage

12 V

Rippled noise ratio

66 dB

Output current

0.25 ... 8 A

Current limit

yes

Short circuit protection

yes, hicc-up mode

Overvoltage protection

yes (> 14.5 V)

Protection class

IP 20

Noise emission

EN 55011 [9], EN 55022

(CIS PR22) Class B [6],

EN 50083-2 [2]

EN 61000-6-1 [10]/

EN 61000-6-2 [11]

-10 ... +60 °C

Immunity

Temperature range

Environmental conditions

Temperature range

-10 ... +55 °C

Relative humidity

 ≤ 80 % (not condensing)

Mounting method

vertical

Mounting location

splash-proof and

drip-proof

Physical information

Dimensions (l x w x h)

without 19" - adapter

50 x 276 x 148 mm

with 19" - adapter

50 x 301 x 148 mm

Weight

BEB 200, 300 (9048.02) about 1,500 g

BEB 300 (9048.01) about 1,600 g

Delivery contents

1 x Power cord or connector

1 x Bus connector

2 x Terminal resistance 75 Ω

1 x Bus connector 400 mm

2 x Multipole sockets

* to reset device 2 minutes without voltage!

** > 6 A only use bus cable "8 A" !

CE Declaration of Conformity

The Manufacturer

BLANKOM Antennentechnik GmbH · Hermann-Petersilge-Str. 1 · 07422 Bad Blankenburg · Germany

herewith declares the conformity of the products

Product name:	Bus Extender		
Type:	BEB 200	BEB 300	BEB 300
Product number:	9047.01	9048.01	9048.02

according to the following regulations

EN 50083-2
EN 60728-11 (as far as relevant)

and additional device-specific regulations, enclosed above, which these products are subjected to.

Date: 11.01.2010
